

VOLTAGE TRANSFORMER

Model 460 PART # 460-480-240

These transformers are encased in a thermoplastic case with the core and windings encapsulated in resin. They are designed for line to line operation but may also be used in line to neutral or line to ground configuration at 58% of rated voltage.

It is recommended that a 0.75 Amp fuse be used in the secondary to protect the transformer.

Frequency: 50-60 Hz

Primary Voltage: 480 VAC

Standard Secondary Voltage: 240 VAC

Insulation Level: 600 Volts, 10Kv BIL Full Wave

Accuracy: 0.6% @7.5VA

Thermal Rating: 150 VA @ 30C. amb

Terminals are No. 10-32 brass studs with flat washer, lock washer and nut.

All Units come with terminal covers.
